Bilytska Anastasiia

Full Stack Developer

Summary

I have a 1-year of experience as a Full Stack developer and half of it is commercial. Main technologies worked with and prefer to develop - React, React-native, Node.js. While programming, the most interesting for me is to do new tasks, learn technologies and search for the most appropriate solutions. For now my main goals is to develop my skills in architecture and applications structure, writing readable efficient code and creating useful, multifunctional applications.

Skills

Programming Languages/ Technologies

- Javascript
- TypeScript
- ES6
- Rest/API
- HTML5, CSS, LESS
- Bootstrap, (Grid system)

Development Tools

- Git, GitLab
- WebStorm
- npm
- Android Studio
- Xcode
- React Native Debugger

Frameworks, libraries

- React
- React-Native
- Express, Koa
- Redux
- Saga
- Axios
- Rxjs
- PostgreSQL
- moments.js

Operating Systems

- Mac OS, Microsoft Windows 10, Ubuntu

Experience

Ukrainian startup - half a year

Projects:

Delivery from markets:

Description: large project with 3 mobile applications for different roles - client, seller and courier including both platforms - android and ios, and web application for admin.

Main technologies: React-native, TypeScript, Redux, Rxjs, Axios, React.js, Koa.js, PostgreSQL

Responsibilities: implement new logic and new features according to responsive design in Figma. For instance - possibility to change delivery type in order, zooming product images, splitting comments from different users by role(FE and BE - Koa.js), adjusting swiper for onboarding for both platforms - ios and android, etc.

Tips-mobile:

Description: Mobile application for restaurants that allow to scan qr-code and leave tips for waiter.

Main technologies: React-native, Redux, Saga, Axios, Express.js, PostgreSQL

Responsibilities: project from scratch, developing responsive components by design in Figma, connecting app with back-end(Express.js) and DB (postgresql) implementing authentication with JWT, navigation, news and settings screens.

	<p>Pet project "ToHabit" https://github.com/Nastoc4ka/toHabit</p> <p>"ToHabit" - is an app where users can create new habits, mark it done and follow your progress and statistics. Also registration and authentication is implemented.</p> <p>Main technologies: React, Redux, Saga, Axios, Bootstrap, JWT, Express.</p> <p>Also before front-end development I have experience related to the financial area in IT for 5 years.</p>	
Certifications	<p>WEB Frontend Developer from CyberBionic systematics - 4 months</p> <p>React from IT Cluster academy - 3 months</p>	
Languages	<p>English - intermediate, Ukrainian - native, Russian - fluent.</p>	
Education	<p>Audit, Finance and Business Activity, master degree Kyiv National University of Food Technologies Graduated in 2013</p>
